

GobernAI is an artificial intelligence platform that works as a virtual cabinet across government, public opinion analysis and strategic communication, built for governments and leaders.

DECISION INTELLIGENCE

From a public problem to a solution ready to execute

Reducing traffic, improving public safety or transforming a public service requires analysing data, comparing alternatives and anticipating their effects.

GobernAI helps municipal, regional and national governments design, validate and communicate solutions using real information, **100% tailored to their territory**, drawing on proven knowledge from more than 50 countries, over 1 million articles by global experts and top-tier international databases.

GOBERNAI EXECUTIVE

Four capabilities. One platform.

FACTUM

Solutions for government

Studies the problem, compares alternatives that apply to the territory, estimates their likely effects and identifies legal, economic and operational constraints. The result is a concrete delivery roadmap.

ÁGORA

Virtual survey

Builds a virtual replica of the citizenry to estimate how different social and territorial groups could react, which arguments would build support or rejection, and where conflict could emerge.

POLITEIA

Strategic communication

Turns the decision into a complete communication plan. Defines the narrative and the messages for each audience, and produces speeches, press releases, social content, interview talking points and video scripts.

AEGIS

Media and social media radar

Monitors the media, social networks and other selected sources. Detects emerging topics, shifts in the conversation and potential crises so you can respond in time.

GobernAI brings the results together in a single dossier, with the final call always in the hands of the government:

[Recommended solution](#)
[Alternatives](#)
[Costs and risks](#)
[Roadmap](#)
[Citizen reaction](#)
[Communication materials](#)

EUROPEAN VALIDATION

GobernAI has been selected for **ACCEND**, the European deep tech acceleration programme funded by the European Union under **Horizon Europe**, in its Smart Cities track.

GobernAI is also part of the **NVIDIA Inception Program**, NVIDIA's global network for companies building on artificial intelligence.

Book a call for a personalised demo of GobernAI's capabilities.
